Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

See Diphtheria, measles, scarlet fever, and tuberculosis, page 2670.

SMALLPOX.

Reported Cases in Which Vaccination Histories of Patients Have Been Given.

Pursuant to resolutions adopted by the conference of State and Territorial health authorities with the Public Health Service in June, 1912, certain States began reporting the vaccination histories of persons developing smallpox in their respective jurisdictions. Minnesota began with the month of June, 1912, Massachusetts and New York with the month of October, 1912, and other States began at various dates thereafter.

The following table is a compilation of the reports to and including June 30, 1914. It will be noted that some of the States were much more successful than others in obtaining definite information as to whether the patients had or had not been vaccinated.

State and year.	Cases reported.	Vaccination history of cases.				Remarks.
		Vaccinated within 7 years preceding attack.	Last vaccinated more than 7 years preceding attack.	Never successfully vaccinated.	History not obtained or uncertain.	
1912.						
Massachusetts	37	1	1	23	12	October, November, December.
Minnesota	1,066	25	76	775	190	7 months, June to December.
Montana	20	.....	.....	4	16	November only.
New York	372	.....	29	204	139	October, November, December.
1913.						
California	662	24	36	419	183	10 months, March to December.

TETANUS.

City Reports for Week Ended Sept. 12, 1914.

During the week ended September 12, 1914, tetanus was notified by cities as follows: Cleveland, Ohio, 1 death; Detroit, Mich., 1 death; Mobile, Ala., 1 death; New York, N. Y., 1 case and 2 deaths.

TRACHOMA.

Kentucky.

Surg. John McMullen, of the Public Health Service, reports that during the last week in August an inspection of certain schools in Wolfe, Morgan, and Magoffin Counties, Ky., was made, to ascertain the prevalence of trachoma. Eleven schools were visited, and 448 pupils were examined. Of this number 97, or 21.6 per cent, of the pupils were found to be affected with trachoma.

In Wolfe County the one school examined had 45 pupils and 11 of them had trachoma—24.44 per cent.

One school in Morgan County had 36 pupils and 7 cases of trachoma—19.4 per cent.

In Magoffin County nine schools were visited, 367 pupils examined, and 79, or 21.5 per cent, found to be suffering with trachoma.

It is interesting to note that the schools in Salyersville, the county seat of Magoffin County, has 18 cases of trachoma among the 103 pupils present and examined on that date. It is unusual to find trachoma so prevalent in a town school, as it is usually more prevalent in the rural districts. Besides the pupils of the school a large number of the citizens of the town were present, and a number of cases of trachoma were found among them.

TUBERCULOSIS.

See Diphtheria, measles, scarlet fever, and tuberculosis, page 2670.

TYPHOID FEVER.

Maine—Portland.

Surg. McIntosh, of the Public Health Service, reported that during the week ended August 22, 1914, 33 cases of typhoid fever had been notified in Portland, Me., making a total of 79 cases reported since the beginning of the outbreak in that city.
